window selection guide

windows and doors are a key part of a home's character and atmosphere – they provide views, daylight, ventilation and a sense of spaciousness...

There are a range of factors to consider when choosing the right windows and doors.

aesthetics

Windows and doors are a major aesthetic feature of any building. The style of architecture used, ranging from heritage and federation to contemporary, usually plays a significant role in the type of window or door selected. Other factors such as size, shape, colour and glass type also need to be considered to achieve the desired look.

function and performance

Windows and doors by definition are expected to provide uninterrupted views and control airflow, whilst operating effortlessly. In recent times, market needs and government regulations have increased the performance requirements for windows and doors, with issues such as energy saving, acoustics, security and bushfires needing to be addressed.

quality and value

Windows and doors are expected to perform at peak levels for an extended period of time. Selection based solely on cost may be regretted over time. Consider factors such as maintenance and resale value. Your aim should be to get the quality you want and the options you desire, at a price you can afford.

Please note: Some products may not be available in your location and may be subject to local variation or climate requirements. For more information call (07) 5520 1200

c-view's smart solutions

Pradella Group

solar comfort

Choosing our Solar Comfort™ range for your home can be one of the most effective investments you can make. It is designed to simply and economically manage the heat of summer and the cold of winter, while maintaining your comfort, uninterrupted views and the benefits of daylight.

flameshield

If you are constructing a house in a bush fire-prone area, you are required by new building codes to use bush fire rated building materials for construction. To help you meet these requirements, Bradnam's developed FlameShield, a range of bush fire rated windows and doors.

sound smart

Whether it's from traffic, aircraft, trains, factories or even neighbours, unwanted noise can spoil the comfort of your home. Sound Smart™ is designed to solve your noise problems. If your home faces a heavily trafficked road, installing Sound Smart windows and doors will turn a busy thoroughfare into a blissful urban hum.
